                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             mmalia; Eutheria; (bases 1 to 282)
                       99
                                                                                                           (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pND42 (gil4732114|gb|AFI2972.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vactor DNA and transformed into
  adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              as follows: PCRamplified cDNA inserts from NIH_BMAP_M_S2 clones from which 3' ESTs had been derived was used as a driver in a hybridization with the NIH_BMAP_M_S2 library in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     previously described (Bonaldo, Research 6:791-806, 1996)" 71 c 76 g 123 t

                                                                                                                                                                                                                                                                                                                                                                                                                         The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to identify it as a clone from the normalized brain stems library cDNA Library Preparation: M.B. Soares Lab Clone distribution: NIH BMAP cDNA clones will be made available by the means that is soon to be determined. When NIH determines the means for distribution of the BMAP cDNA clones, this record will be updated accordingly when that means is determined.

NIH_BWAP_M_S3.3 library is a subtracted library of a
series, ultimately derived from a mixture of individually
tagged normalized libraries from ten regions of the mouse
brain (cerebellum, brain stems, olfactory bulbs,
hypothalamus, cortex, amygdala, basal ganglia, pineal
gland, striatum, hipoccampus) after a series of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  301 443 1706

The following serially subtracted libraries were generated in this process: NIH_BMAP_M_S3.3, NIH_BMAP_M_S2, NIH_BMAP_M_S1.

The subtracted library (NIH_BMAP_M_S2, NIH_BMAP_M_S1.

The subtracted library (NIH_BMAP_M_S3.3) was constructed as follows: PCRamplified CDNA inserts from NIH_BMAP_M_S1.

clones from which 3' ESTs had been derived was used as a driver in a hybridization with the NIH_BMAP_M_S2 library in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to double-stranded circles and electroporated into DH10B bacteria (LifeTechnologies) to generate the NIH_BMAP_M_S3.3 library. This procedure has been previously described (Bonaldo, Lennon and Soares, Genome Research 6:791-806, 1996)

/note="Vector: pCR2.1-TOPO; Site_1: EcoRI; Soybean genomic DNA (cv. Faribault) was amplified by PCR with primers corresponding to the 'P-loop' and the region preceding the 'GLPLA' motif of the nucleotide-binding site (NBS) of soybean GenBank accession AF060192. PCR products of approximately 450 bp were cloned into pCR2.1-TOPO vector, and sequenced with M13 universal primers."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (bases 1 to 385)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pND42 (gil4732114 [gb]AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli xL10-Gold (Stratagene) cells and selected for ampicillin resistance."

                                                                                                                                                                             CC The invention relates to the Moraxella catarrhalis strain ATCC43617
CC BASB122 and BASB124 proteins (AAB60640 and AAB60641, respectively). The BASB122 and to DNA encoding them (AAF59778 and AAF59779, respectively). The CC invention also relates to immunogenic fragments of the BASB122 and CC BASB124 proteins, expression vectors and host cells comprising BASB122 or CC or BASB124 nuccine compositions comprising the BASB122 or BASB122 or CC or DASB124, vaccine compositions comprising the BASB122 or BASB122 or CC compositions comprising a manti-BASB122 or BASB124 therapeutic compositions comprising a mati-BASB122 or BASB124 therapeutic compositions comprising a mati-BASB122 or BASB124 therapeutic compositions of the invention are useful as prophylactic or therapeutic compositions of BASB122 or BASB124 proteins or antibodies. The vaccine compositions of the invention are useful as prophylactic or therapeutic agents against Moraxella catarrhalis infections in mammals, particularly isolated from the human upper respiratory tract, which is responsible for could be seen and interventions and insertions in the dearly people, and sinusitis, consocomial infections and, less frequently, invasive diseases. BASB122 or BASB124 proteins or nucleotides may additionally be used in screening for covel antibacterial compounds, and in the diagnosis and staging of infections. The present sequence are presented and some of contrains the warrant and in the diagnosis and staging of infections. The present sequence are presented to the protein of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              seq_name:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /SIDS1/gcgdata/geneseq/geneseqn-embl/NA2001A.DAT:ABA16416 -/SIDS1/gcgdata/geneseq/geneseqn-embl/NA2001A.DAT:ABA16419 -/SIDS1/gcgdata/geneseq/geneseqn-embl/NA2001A.DAT:AAA69628 -/SIDS1/gcgdata/geneseq/geneseqn-embl/NA2001A.DAT:AAA6912863 -/SIDS1/gcgdata/geneseq/geneseqn-embl/NA2001A.DAT:AAH53149 +/SIDS1/gcgdata/geneseq/geneseqn-embl/NA2001A.DAT:AAA533704 +/SIDS1/gcgdata/geneseq/geneseqn-embl/NA2001A.DAT:AAH32183 +/SIDS1/gcgdata/geneseq/geneseq/geneseqn-embl/NA2001A.DAT:AAH32084 +/SIDS1/gcgdata/geneseq/geneseq/geneseqn-embl/NA2001A.DAT:AAH32084 +/SIDS1/gcgdata/geneseq/geneseq/geneseqn-embl/NA2001A.DAT:AAH32084 +/SIDS1/gcgdata/geneseq/geneseq/geneseqn-embl/NA2001A.DAT:AAH32084 +/SIDS1/gcgdata/geneseq/geneseq/geneseqn-embl/NA2001A.DAT:AAH32084 +/SIDS1/gcgdata/geneseq/geneseq/geneseqn-embl/NA2001A.DAT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New BASB122 and BASB124 polypeptides and polynucleotides from Moraxella catarrhalis strain ATCC 43617, useful as therapeutic agents or vaccines against bacterial infections, e.g. otitis media or pneumonia \,

The library has a number of uses described in the specification e.g. is useful for aidentifying diagnostic and therapeutic compositions. M. Catarrhalis (Branhamella catarrhalis) is a large aerobic, gram-negative diplococcus, normally found among the bacterial flora of human upper airways. M. catarrhalis is known to cause acute, localised infections such as otitis media, sinusitis and bronchopulmonary infection and life-threatening, systemic diseases including endocarditis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             51

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and

Primary nucleotide sequences these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer-based commercial importance. The products can be used to detect the presence diagnosing Enterococcus faecalis in samples. They can also be used for progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal

The ndpCPCP-x proteins, polynucleotides, anti-ndpCR-x antibodies, and modulators ndpCR-x are useful for the diagnosis and treatment of diseases or conditions such as thyroid disorders (thyreotoxicosis), renal fall inflammatory conditions (Crohn's disease), disease related to cell differentiation and homeostasis, rheumatold arrhritts,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   22-MAY-2000;

                                                                                                                                                     cc complementary strand of a polynucleotide which complementary to the complementary strand of a polynucleotide which comprises a 5'-end cc sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence complementary to a cc polynucleotide comprises a 1'-end sequence, where the cc the 5'-end sequence/3'-end sequence is selected from those defined in cc the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proceins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and Cc AAH3633 to AAH18742 represent human cDNAs sequences; AAB92446 to CC AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   29-JUL-1999;

                                                                                                                                                                                                            The yeast sec1 suppressor gene SSO2 was isolated as a supreesor of the temperature sensitive defect of the sec 1-1 mutant. When overexpressed in eukaryotic cells the gene renders the cells capable of producing increased amts. of secreted proteins, e.g. antibodies or hydrolytic enzymes. The gene may be used for more efficient biomass produc. from raw material or efficient hydrolysis of a raw

                                                                                                                                                                                                                                                                                        The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activiny inhibin activity and may be useful in the diagnosis and/or inflammation.

                                                                                              diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                  at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                              polymerbide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, cane manning identifications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to isolated polynucleotide (I) and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Percent Similarity:
of an oligonuclectide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                .29-JUL-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SS
```

AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB92893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present invention.

The present invention provides plasmids isolated from Corynebothermoaminogenes encoding a rep protein. These are useful for Coryneform bacteria, which are capable of growing at elevated temperatures and of producing substances such as L-amino acidi present sequence is the coding sequence of the Coryneform bacterial such

New plasmids derived from Corynebacterium thermoaminogenes, improving coryneform bacteria, which can grow at elevated to and for producing useful substances (e.g. L-amino acids)

                                                                                                                                                                                                           The invention relates to novel genes (ABA11004-ABA21534) and proteins CC (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are commedical conditions e.g. by protein or gene therapy. The genes are commedical conditions e.g. by protein or gene therapy. The genes are commedicated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, altergies, autoimmune thyroiditis, diabetes mellitus, Crohn's colitis; (c) cardiovascular disorders such as myocardial ischaemias; (c) clitis; (c) cardiovascular disorders such as myocardial ischaemias; (c) disease; and (f) infectious diseases such as viral, bacterial, fungal cardiovascular diseases such as viral diseases cardiovascular diseases diseases diseases diseases diseases disease

                                                                                                                                                                                                                                  CC (ABB14678 ABB18001) useful for preventing, treating or ameliorating capacitations e.g. by protein or gene therapy. The genes are conditions e.g. by protein or gene therapy. The genes are conditions e.g. by protein or gene therapy. The genes are conditions e.g. by protein or gene therapy. The genes are conditions arise of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast can ovarian cancer and other cancers of the adrenal gland, bone, bone, commune thereof the diagnosis, restricted in the condition of the capacitation of the diagnosis, autoimmune thyroiditis, diabetes mellitus, Crohn's colitis; (c) cardiovascular disorders such as myocardial ischaemias; colitis; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and colitis; (d) cardiovascular disorders such as viral, bacterial, fungal content of the sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                          The invention relates to novel genes (ABA11004-ABA21534) and proteins C (ABB14678-ABB18001) useful for preventing, treating or ameliorating c medical conditions e.g. by protein or gene therapy. The genes are C isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast c and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune C thacmolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's C disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (c) wound healing; (e) neurological diseases e.g. cerebral anoxia and c epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infectious diseases such as viral, bacterial, fungal c worte: The semmence data for this patent did not form the semmence data for this patent did not form.

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG1840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            34 AsnGlnGlnThrIleGluGlnThr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 8377 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to novel genes (ABA11004-ABA21534) and proteins CC (ABB14678-ABB18001) useful for preventing, treating or ameliorating CC medical conditions e.g. by protein or gene therapy. The genes are CC isolated from a range of human tissues disclosed in the specification. CC The nucleic acids, proteins, antibodies and (ant)ayonists are useful CC in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast CC marrow, breast, gastrointestinal tract, liver, lung, or urogenital; CC marrow, breast, gastrointestinal tract, liver, lung, or urogenital; CC haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's CC disease, multiple sclerosis, rheumatoid arthritis and ulcerative CC (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and CC epilepsy; and (f) infectious diseases such as wiral, bacterial, fungal CC note: The seminance data for this patent did not form.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification.
